CORPEX

INDUSTRIAL IT & AUTOMATION

AI-Driven Accuracy for Product Identification and Compliance

The CORPEX Label Inspection System ensures every product label is present, correct, and properly positioned.

CORE FEATURES

IT Infrastructure Management
Setup, maintenance, and optimization of industrial networks, servers, and virtualization environments

ERP and System Integration
Connects vision systems, MES, and PLCs with ERP platforms for unified process control

Cybersecurity and Data Protection
Implements firewalls, endpoint protection, and network security (including Sophos routers) to safeguard operations

Remote and Onsite Support
Provides continuous monitoring, remote troubleshooting, and on-location technical service for industrial sites

Automation and Process Optimization
Enhances production efficiency by integrating smart devices, sensors, and machine vision with factory systems

User Training and Awareness
Conducts security and operations training to build safer, more efficient workplaces across IT and OT environments

From secure networks and servers to software integration and remote monitoring, CORPEX ensures that your industrial systems are stable, connected, and ready for Industry 4.0.
